

# 2001-2014 Ford F150 LED License Plate Lights

## Contents:

(2) LED License Plate Lights

## Tools Required:

-Flat Head Screw Driver  
-Trim Panel Removal Tool

### Step 1\\

Using a flat head screw driver or trim panel removal tool, carefully pry the factory license plate light from the bumper.

### Step 2\\

Next, turn the light socket and harness counter-clockwise to release from the factory license plate light. Then carefully pull the light bulb away from the socket.

### Step 3\\

Plug the new light harness into the factory light bulb socket. **\*\*Note:** Test lights for proper function at this point. If the light is not working, unplug the harness from the socket and rotate 180 degrees and test light again.

### Step 4\\

Install the new license plate light until it clicks in place. Installation is now complete.
