

Locking TracKnob Installation Instructions & Packing Check-List

SKU# 25700

Locking TracKnobs are a theft-deterrent device designed to add security to your TracRac System.

- Remove thread protectors from each knob.
- Remove existing knob from the base of your Overhead Rack and replace it with a Locking TracKnob.
- Tighten each knob.
- Use key to engage the knob's lock. *The lock is engaged when the knob handle spins without moving the knob threads.*
- Store your keys in a safe place. *(They're difficult to replace!)*
- Use Locking TracKnob on the Cargo Holder and other components as well.

NOTE: Your knob threads have been coated with an anti-seize compound to prevent corrosion. The threads should be re-coated with "Never-Seize" or heavy grease every four months.
